IPMA Clinical Observation Guidelines

The IPMA Clinical Reference Centre Program provides structured observational access to image-guided interventional pain and minimally invasive spine procedures within established clinical environments. The program prioritises patient safety, professional standards, and evidence-based interventional practice.

1. Scope of Observation

Participation is observational unless otherwise formally credentialed. Observers do not independently assess patients, provide clinical advice, or perform procedural steps without institutional approval.

2. Eligibility Requirements

Applicants must hold current AHPRA registration (or recognised equivalent), maintain appropriate professional indemnity insurance, and comply with host institutional governance requirements.

3. Patient Consent and Confidentiality

All observational visits require explicit patient consent and strict adherence to Australian privacy legislation. Recording or dissemination of identifiable patient information is prohibited.

4. Professional Conduct

Observers are expected to respect clinical workflow, maintain professional standards, and avoid commercial activity within clinical environments.

5. Clinical Governance

Reference Centre activities operate under a governance framework prioritising procedural safety, ethical practice, and continuous quality improvement.
